## Overview -

**Sports Station** is a sports shop targeting the huge audience of jersey market in Bangladesh. We want to launch a sport based online shop where jerseys from international and domestic football teams will be sold primarily. We will also keep e custom design option where customers can print their jerseys of their own design. We want to create a trusted sports shop in web. There are many facebook and instagram pages which also do the same job but we want to keep it minimal and time saving to the customers. We also have a wish to extend it so that we can sell other sports products.

For this website we need two sections.

- Administrator (Admin Dashboard)
  - Admins who will control the content of the site. Add products and control inventory/
- User Section (Customer account)

Anyone can browse the site and order products. Users have to provide personal details like name , address, contact number. There will be wishlist and order history section and they can review products.

## Technologies -

- Frontend
  - React JS

- Backend
  - NodeJS
  - ExpressJS
- Database
  - MySQL

## CONCLUSION -

We are very new in this project. We have to learn a lot and do a lot of hard work. Everything seems impossible at this moment still our team name **TEAM POSSIBLE**.
